PREFERENCE OVER ALL OTHER SAW-MILLS The saw has a lateral vibration on adjustable rocker boxes, and when thrown out of line will recover itself by the action of the driving belt; while at the same time the arbour has no later-al play in the boxes, and is made to fit close with the shoulders to prevent the oil from getting out while in operation, a matter of great importance where the motion is as rapid as in circular saws. The arrangement of this machine is so per-fect, simple and adjustable, that a much thin-ner saw can be used than is on any other mill,
